

The Electrical Apprenticeship program provides a solid understanding of the National Electrical Code (NEC), its layout, the requirements for different electrical systems, and the components of those systems. This program discusses the risks involved with electricity and electrical systems, as well as the safety equipment and measures that are in place to protect electricians and the general public.

As an Electrical Apprentice, you will install and maintain electrical systems, placing wiring in buildings and repairing electrical controls on equipment. Some of your responsibilities will be reading blueprints and placing electrical conduits inside walls, ceilings, underground, and other areas. You will feed insulated wire through conduits and install various electrical equipment, including transformers, circuit breakers, outlets, switches, and lighting.

Classroom Hours

1st & 2nd Years: M/W 6:00 p.m. – 9:00 p.m.

3rd & 4th Years: T/Th 6:00 p.m. – 9:00 p.m.
