314.23(F) Raceway-Supported Enclosures, with Devices, Luminaires, or Lampholders.

An enclosure that contains a device(s), other than splicing devices, or supports a luminaire(s), lampholder, or other equipment and is supported by entering raceways shall not exceed 1650 cm³ (100 in.³) in size. It shall have threaded entries or have hubs identified for the purpose. It shall be supported by two or more conduits threaded wrenchtight into the enclosure or hubs. Each conduit shall be secured within 450 mm (18 in.) of the enclosure.

Notes:
1. Cover is defined as the shortest distance in millimeters (inches) measured between a point on the top surface of any direct-buried conductor, cable, conduit, or other raceway and the top surface of finished grade, concrete, or similar cover.
2. Raceways approved for burial only where concrete encased shall require concrete envelope not less than 50 mm (2 in.) thick.
3. lesser depths shall not be permitted where cables and conductors rise for terminations or splice or where access is otherwise required.
4. Where one of the wiring method types listed in Columns 1–3 is used for one of the circuit types in Columns 4 and 5, the shallowest depth of burial shall be permitted.
5. Where solid rock prevents compliance with the cover depth specified in this table, the wiring shall be installed in metal or nonmetallic raceway permitted for direct burial. The raceways shall be covered by a minimum of 30 mm (2 in.) of concrete extending down to rock.
An enclosure supported from a structural member of a building or from grade shall be rigidly supported either directly or by using a metal, polymeric, or wood brace.
250.24(C) Grounded Conductor Brought to Service Equipment

• Where an ac system operating at less than 1000 volts is grounded at any point, the grounded conductor(s) shall be run to each service disconnecting means and shall be Connected to each disconnecting means grounded conductor(s) terminal or bus. A main bonding jumper shall connect the grounded conductor(s) to each service disconnecting means enclosure. The grounded conductors shall be installed in accordance with 250.24(C)(1) through (C)(3).
408.41 Grounded Conductor Terminations.

Each grounded conductor shall terminate within the panelboard in an individual terminal that is not also used for another conductor.
300.15 (C) Protection.

A box or conduit body shall not be required where cables enter or exit from conduit or tubing that is used to provide cable support or protection against physical damage. A fitting shall be provided on the end(s) of the conduit or tubing to protect the cable from abrasion.
314.20 In Wall or Ceiling

In walls or ceilings with a surface of concrete, tile, gypsum, plaster, or other noncombustible material, boxes employing a flush-type cover or faceplate shall be installed so that the front edge of the box, plaster ring, extension ring, or listed extender will not be set back of the finished surface more than 6 mm (1/4 in.).
330.10 Uses Permitted

(A) General Uses.
Type MC cable shall be permitted as follows:
(1) For services, feeders, and branch circuits.
(2) For power, lighting, control, and signal circuits.
(3) Indoors or outdoors.
(4) Exposed or concealed.
(5) To be direct buried where identified for such use.
(6) In cable tray where identified for such use.
(7) In any raceway.
320.12 Uses Not Permitted

Type AC cable shall not be used as follows:
(1) Where subject to physical damage
(2) In damp or wet locations
(3) In air voids of masonry block or tile walls where such walls are exposed or subject to excessive moisture or dampness
(4) Where exposed to corrosive conditions
(5) Embedded in plaster finish on brick or other masonry in damp or wet locations
Access and working space shall be provided and maintained about all electrical equipment to permit ready and safe operation and maintenance of such equipment.
110.26 Spaces About Electrical Equipment

Access and working space shall be provided and maintained about all electrical equipment to permit ready and safe operation and maintenance of such equipment.

(A) Working Space.
Working space for equipment operating at 600 volts, nominal, or less to ground and likely to require examination, adjustment, servicing, or maintenance while energized shall comply with the dimensions of 110.26(A)(1), (A)(2), and (A)(3)
440.14 Location

Disconnecting means shall be located within sight from and readily accessible from the air-conditioning or refrigerating equipment. The disconnecting means shall be permitted to be installed on or within the air-conditioning or refrigerating Equipment. The disconnecting means shall not be located on panels that are designed to allow access to the air-conditioning or refrigeration equipment or to obscure the equipment nameplate(s).
 ARTICLE 100 - DEFINITIONS

Accessible, Readily (Readily Accessible)

Capable of being reached quickly for operation, renewal, or inspections without requiring those to whom ready access is requisite to climb over or remove obstacles or to resort to portable ladders, and so forth.
(A) Grounding Type.
Receptacles installed on 15- and 20-ampere branch circuits shall be of the grounding type.
210.8(B) Other Than Dwelling Units.

All 125-volt, singlephase, 15- and 20-ampere receptacles installed in the locations specified in 210.8(B)(1) through (8) shall have ground-fault circuit-interrupter protection for personnel.

(4) Outdoors
210.8 Ground-Fault Circuit-Interrupter Protection for Personal(B) Other Than Dwelling Units.

Ground-fault circuit-interruption for personnel shall be provided as required in 210.8(A) through (C). The ground-fault circuit-interrupter shall be installed in a readily accessible location.
GFCI Introduced in the 1971 NEC
210.8 Ground-Fault Circuit-Interrupter Protection for Personal(B) Other Than Dwelling Units.

(1) Bathrooms

Article 100 – Definitions
Bathroom. An area including a basin with one or more of the following: a toilet, a urinal, a tub, a shower, a bidet, or similar plumbing fixtures.
210.8 Ground-Fault Circuit-Interrupter Protection for Personal(B) Other Than Dwelling Units.

(2) Kitchens

Article 100 “an area with a sink and permanent facilities for food preparation and cooking.”
210.8 Ground-Fault Circuit-Interrupter Protection for Personal(B) Other Than Dwelling Units.

(3) Rooftops
210.8 Ground-Fault Circuit-Interrupter Protection for Personal(B) Other Than Dwelling Units.

(4) Outdoors

Electrocution and electrical shock accident data provided by the U.S. Consumer Product Safety Commission indicate that electric shock accidents occur at locations other than dwelling units and construction sites.
210.8 Ground-Fault Circuit-Interrupter Protection for Personal(B) Other Than Dwelling Units.

(5) Sinks — where receptacles are installed within 1.8 m(6 ft) of the outside edge of the sink.
210.8 Ground-Fault Circuit-Interrupter Protection for Personal(B) Other Than Dwelling Units.

(6) Indoor wet locations
210.8 Ground-Fault Circuit-Interrupter Protection for Personal(B) Other Than Dwelling Units.

(7) Locker rooms with associated showering facilities
210.8 Ground-Fault Circuit-Interrupter Protection for Personal(B) Other Than Dwelling Units.

NEW!

(8) Garages, service bays, and similar areas where electrical diagnostic equipment, electrical hand tools, or portable lighting equipment are to be used
210.8 Ground-Fault Circuit-Interrupter Protection for Personal

Ground-fault circuit-interruption for personnel shall be provided as required in 210.8(A) through (C). The ground-fault circuit-interrupter shall be installed in a readily accessible location.
210.8 Ground-Fault Circuit-Interrupter Protection for Personal

Ground-fault circuit-interruption for personnel shall be provided as required in 210.8(A) through (C). The ground-fault circuit-interrupter shall be installed in a readily accessible location.

Accessible, Readily (Readily Accessible).
Capable of being reached quickly for operation, renewal, or inspections without requiring those to whom ready access is requisite to climb over or remove obstacles or to resort to portable ladders, and so forth.
210.8 Ground-Fault Circuit-Interrupter Protection for Personal(A) Dwelling Units

All 125-volt, single-phase, 15- and 20-ampere receptacles installed in the locations specified in 210.8(A)(1) through (8) shall have ground-fault circuit interrupter protection for personnel.
210.8 Ground-Fault Circuit-Interrupter Protection for Personal(A) Dwelling Units

All 125-volt, single-phase, 15- and 20-ampere receptacles installed in the locations specified in 210.8(A)(1) through (8) shall have ground-fault circuit interrupter protection for personnel.

(1) Bathrooms

Article 100 – Definitions

Bathroom. An area including a basin with one or more of the following: a toilet, a urinal, a tub, a shower, a bidet, or similar plumbing fixtures.
210.8 Ground-Fault Circuit-Interrupter Protection for Personal(A) Dwelling Units

(1) Bathrooms

Article 100 – Definitions

Bathroom. An area including a basin with one or more of the following: a toilet, a urinal, a tub, a shower, a bidet, or similar plumbing fixtures.
210.8 Ground-Fault Circuit-Interrupter Protection for Personal(A) Dwelling Units

(2) Garages, and also accessory buildings that have a floor located at or below grade level not intended as habitable rooms and limited to storage areas, work areas, and areas of similar use.
210.8 Ground-Fault Circuit-Interrupter Protection for Personal(A) Dwelling Units

(3) Outdoors
Exception to (3): Receptacles that are not readily accessible and are supplied by a branch circuit dedicated to electric snow-melting, deicing, or pipeline and vessel heating equipment shall be permitted to be installed in accordance with 426.28 or 427.22, as applicable.
210.8 Ground-Fault Circuit-Interrupter Protection for Personal(A) Dwelling Units

(4) Crawl spaces — at or below grade level
(5) Unfinished basements — for purposes of this section, unfinished basements are defined as portions or areas of the basement not intended as habitable rooms and limited to storage areas, work areas, and the like.
210.8 Ground-Fault Circuit-Interrupter Protection for Personal(A) Dwelling Units

(5) Unfinished basements — for purposes of this section, unfinished basements are defined as portions or areas of the basement not intended as habitable rooms and limited to storage areas, work areas, and the like

Exception to (5): A receptacle supplying only a permanently installed fire alarm or burglar alarm system shall not be required to have ground-fault circuit-interrupter protection.
760.41 NPLFA Circuit Power Source Requirements

(B) Branch Circuit.
The branch circuit supplying the firealarm equipment(s) shall supply no other loads. The location of the branch-circuit overcurrent protective device shall be permanently identified at the fire alarm control unit. The circuit disconnecting means shall have red identification, shall be accessible only to qualified personnel, and shall be identified as “FIRE ALARM CIRCUIT.” The red identification shall not damage the overcurrent protective devices or obscure the manufacturer’s markings. This branch circuit shall not be supplied through ground-fault circuit interrupters or arc-fault circuit-interrupters.
210.8 Ground-Fault Circuit-Interrupter Protection for Personal(A) Dwelling Units

(6) Kitchens — where the receptacles are installed to serve the countertop surfaces
210.8 Ground-Fault Circuit-Interrupter Protection for Personal(A) Dwelling Units

(7) Sinks — located in areas other than kitchens where receptacles are installed within 1.8 m (6 ft) of the outside edge of the sink.
210.8 Ground-Fault Circuit-Interrupter Protection for Personal(A) Dwelling Units

(8) Boathouses
760.136 Separation from Electric Light, Power, Class 1, NPLFA, and Medium-Power Network-Powered Broadband Communications Circuit Conductors

(A) General.

(B) Power-limited fire alarm circuit cables and conductors shall not be placed in any cable, cable tray, compartment, enclosure, manhole, outlet box, device box, raceway, or similar fitting with conductors of electric light, power, Class 1, non-power-limited fire alarm circuits, and medium-power network-powered broadband communications circuits...
406.9(B) Wet Locations.

(1) 15- and 20-Ampere Receptacles in a Wet Location. 15- and 20-ampere, 125- and 250-volt receptacles installed in a wet location shall have an enclosure that is weatherproof whether or not the attachment plug cap is inserted. For other than one- or two-family dwellings, an outlet box hood installed for this purpose shall be listed, and where installed on an enclosure supported from grade as described in 314.23(B) or as described in 314.23(F) shall be identified as “extra-duty.” All 15- and 20-ampere, 125- and 250-volt nonlocking- type receptacles shall be listed weather-resistant type.

358.30 Securing and Supporting

• EMT shall be installed as a complete system in accordance with 300.18 and shall be securely fastened in place and supported in accordance with 358.30(A) and (B).

• (A) Securely Fastened EMT shall be securely fastened in place at least every 3 m (10 ft). In addition, each EMT run between termination points shall be securely fastened within 900 mm (3 ft) of each outlet box, junction box, device box, cabinet, conduit body, or other tubing termination.
300.15 Boxes, Conduit Bodies, or Fittings - Where Required

• A box shall be installed at each outlet and switch point for concealed knob-and-tube wiring.
• Fittings and connectors shall be used only with the specific wiring methods for which they are designed and listed.
• Where the wiring method is conduit, tubing, Type AC cable, Type MC cable, Type MI cable, nonmetallic-sheathed cable, or other cables, a box or conduit body shall be installed at each conductor splice point, outlet point, switch point, junction point, termination point, or pull point, unless otherwise permitted in 300.15(A) through (M).
Wiring in Boxes, Conduit Bodies, and Handholes Must be Accessible
Section 314.29

Boxes, conduit bodies, and handhole enclosures must be installed so that the wiring contained in them can be made accessible without removing any part of the building, or excavating sidewalks, paving, or earth.
358.24 Bends — How Made

- Bends shall be made so that the tubing is not damaged and the internal diameter of the tubing is not effectively reduced. The radius of the curve of any field bend to the centerline of the tubing shall not be less than shown in Table 2, Chapter 9 for one-shot and full shoe benders.
358.30 Securing and Supporting

- EMT shall be installed as a complete system in accordance with 300.18 and shall be securely fastened in place and supported in accordance with 358.30(A) and (B) or permitted to be unsupported in accordance with 358.30(C).

- (A) Securely Fastened EMT shall be securely fastened in place at least every 3 m (10 ft). In addition, each EMT run between termination points shall be securely fastened within 900 mm (3 ft) of each outlet box, junction box, device box, cabinet, conduit body, or other tubing termination.
(A) Accessibility Overcurrent devices shall be readily accessible and shall be installed so that the center of the grip of the operating handle of the switch or circuit breaker, when in its highest position, is not more than 2.0 m (6 ft 7 in.) above the floor or working platform unless one of the following applies:
240.24 Location in or on Premises

• (D) Not in Vicinity of Easily Ignitible Material
  Overcurrent devices shall not be located in the vicinity of easily ignitible material, such as in clothes closets.

• Examples of locations where combustible materials may be stored are linen closets, paper storage closets, and clothes closets.

• (E) Not Located in Bathrooms
  In dwelling units and guest rooms or guest suites of hotels and motels, overcurrent devices, other than supplementary overcurrent protection, shall not be located in bathrooms.
