

Active Phase Considerations for LID Practices

This presentation covers the basics of Low Impact Development, and identifies specific practices that help bridge the gap between active phase construction and the implementation of LID features and practices. It covers MS4 permit language, inspector perspectives and inspection considerations, and responsibilities between the different roles of the municipalities, the operators, and the inspectors onsite. It explores strategies to ensure effective maintenance of LID features to ensure their operation during the post-construction phase of the project.

Ryan is the Stormwater Manager for Erosion Control Services, and oversees stormwater programs for the company. Previously, Ryan has worked with Utah DWQ as the Construction Program Coordinator, and UDOT on the Stormwater team. Before moving to Utah in 2018, Ryan spent four years working in stormwater across multiple permits in California. He holds a B.S. in Earth Sciences with a minor in Soil Science from Cal Poly San Luis Obispo.
